135°
330° Vertical and horizontal rotation with zoom

Large 5" display

Two-way communication

Temperature monitoring

Automatic night mode

Sound detection LED indicator

HD 720p quality

VOX standby mode

Two-way communication

Save time and gain peace of mind with the Neno Vista baby monitor. Thanks to the two-way communication function, you can hear every sound coming from your baby's room and, if necessary, calm the baby from a distance.

Temperature monitoring

Monitoring the temperature in the baby's room gives you an accurate picture of the conditions in the room. You can react in real time to any changes that may affect the child's comfort during sleep.

Automatic night mode

Thanks to invisible IR LEDs, the picture on the receiver's screen remains perfectly clear, so you can keep an eye on the baby after dark without having to look into the room.

Alarm function

The practical alarm function will help you remember your childcare duties. You can use it as a reminder for feeding times or administering medication.

8 pre-loaded lullabies

A set of pre-loaded lullabies comes in handy if your little one likes to fall asleep to soft music. Using the receiver, you can play the melody of your choice in just a few seconds.

Sound detection

The intelligent sound detection system lets you know immediately when your presence is needed in the child's room. The intensity of the sound is indicated by the LED indicator built into the receiver, which changes colour depending on the intensity of the sound.

Wide operating range

The Neno Vista Nanny is perfect for use indoors in a flat or detached house. The long range (up to 50 m indoors, up to 300 m outdoors) means you can keep an eye on baby while you are on another floor or in the garden.

up to 50 m
indoor
•
up to 300 m
outdoor

Triple zoom function

With the ability to zoom in, no child's needs will escape your attention, no matter what time of day or where you are in the house.

HD quality

The handy receiver transmits high quality images (HD resolution) so you can see the infant and the room clearly every time.

REC

VOX standby mode

The VOX mode helps to conserve battery life by activating when no sound is detected for a long period of time. The screen will light up again when the baby monitor detects a sound in the baby's room.

REC

Large screen

With the baby monitor at your side, you can get on with your daily tasks with confidence. On the receiver's large 5" screen, you can check your child's current location and activity at any time.

Pan&tilt head

The baby monitor has a moveable head that widens the field of vision. By moving it vertically or horizontally, you can easily check the child's surroundings.

*Flexible
holder
in set*

Two mounting options

You can easily install the monitor by choosing one of two options:

- Using a bar to attach to the cot's railing
- Mounting on the wall using a special bracket

Receiver with long-life battery

When your child is asleep, you can charge your own batteries instead of focusing on charging the receiver! The long-lasting battery means you can use the receiver for up to 8 hours with the screen on, and up to 16 hours in VOX mode.

Pairing capability

By pairing the Neno Vista with an additional camera (up to 4 cameras), you can monitor more than one room. This solution is particularly useful for parents with more than one child.
